Footnotes:

- 1 Sales Pipeline continues to ramp at a healthy pace. Our constraint is the provisioning process. We have become our own resporg to facilitate faster turn up of service. Our pipeline is full so revenue will grow based upon our capacity to turn up the business.
- 2 All other sources of income. Primarily residual income from former Agent business, and charges for "back haul" circuits.
- 3 Q1 - paid a large carrier bill early. This exaggerated the cost base and depressed margin for the quarter.
- 4 Billing costs are directly variable with LD Revenue. Q1 charges artificially high due to one-time set-up fee for new billing system
- 5 Commissions vary almost directly with revenue. Pay based upon money collected. Collections create payment variation.
- 6 Year-to-date margin is expanding due to improved product competitiveness and lower costs from underlying carriers.
- 7 Matching Headcount to service the customer base.
- 8 Primarily costs related to supporting Agents and Marketing Program Roll Outs. ROI has been excellent. Spiked in Q1 for new product roll outs that will impact Q3 and beyond
- 9 Major costs are professional fees for: accounting, tax, and legal; and, office-related infrastructure. This will grow to support volume.
- 10 The margin has been artificially depressed in Q1 due to timing issues (see #3, 4, 6)

TARIFF FORMAT

A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the SCPSC. For example, the 4th revised Sheet 14 cancels the third revised Sheet 14. Because of various suspension periods, deferrals, etc. the SCPSC follows in their tariff approval process, the most current sheet number on file with the Commission is not always the tariff page in effect. Consult the Check Sheet for the sheet currently in effect.

C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a).
- 2.1.1.A.1.(a).I.
- 2.1.1.A.1.(a).I.(i).
- 2.1.1.A.1.(a).I.(i).(1).

D. Check Sheets - When a tariff filing is made with the SCPSC, an updated check sheet accompanies the tariff filing. The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The tariff user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the SCPSC.

SECTION 3 - DESCRIPTION OF SERVICE

3.1 Timing of Calls

- 3.1.1 The Customer's long distance usage charge is based on the actual usage of ATG's network. Usage begins when the called party picks up the receiver. When the called party picks up is determined by hardware answer supervision in which the local telephone company sends a signal to the switch or the software utilizing audio tone detection. When software answer supervision is employed, up to 60 seconds of ringing is allowed before it is billed as usage of the network. A call is terminated when the calling party hangs up thereby releasing the network connection. If the called party hangs up but the calling party does not, chargeable time ends when the network connection is released or by automatic timing equipment in the network. There will be no charges for incomplete calls.
- 3.1.2 The minimum call duration and initial billing period is 60 seconds for all intrastate direct dialed calls unless otherwise specified by this tariff. Any additional period is measured and rounded to the next higher 60 second increment unless otherwise specified by this tariff.
- 3.1.3 All calls will be rounded to the second decimal place amount of a call charge.

3. DESCRIPTION OF SERVICE (continued)

3.2 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance rate centers associated with the originating and terminating points of the call.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. The Company uses the rate centers and associated vertical and horizontal coordinates that are produced by Bell Communications Research in their NPA-NXX V & H Coordinates Tape and Bell's NECA Tariff No. 4

FORMULA:
$$2 \sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$

EXAMPLE: Distance between Miami and New York City -

<u>VH</u>		
Miami	8,351	529
New York	<u>4,997</u>	<u>1,406</u>
Difference	3,354	-879

Square and add: $11,249,316 + 772,641 = 12,021,957$

Divide by 10 and round: $12,021,957 / 10 = 1,202,195.70$
 $= 1,202,196$

Take square root and round: $1,202,196 = 1,096.4$
 $= 1,097 \text{ miles}$
